

How to Use the Lead Scraper

What this tool is

This tool helps you find business contacts safely and quickly from maps. It looks for public contact details and saves them for you.

How to start

First you need to run the application. Open your terminal and run the backend server. Then open the web link it offers you. You will see a clean page where you can start your search.

How to search

Type the city you want to search in the city box. You can also add more cities separated by commas. Next type the industry you are looking for in the industry box. If there are words you want to avoid type them in the exclusions box.

Running the scan

Click the start button to begin. The tool will open a browser hidden from view and start looking for leads. You will see the progress on your screen. You can stop the scan at any point if you have enough results.

Getting your results

Once the scan is finished or stopped you can get the results. Click the download button and you will get a file with all the company names and phone numbers. You can open this file in any spreadsheet program.
